ORTHOSTRETCH® LIKE GLOVES FOR YOUR FEET

Feet are different !!! Therefore, New Feet footwear is adjustable to fit your individual needs.

Footwear with stretch material is very comfortable and can be used by all whose priority is comfort. But stretch is also an important functional feature for people with diabetes, arthritis, bunions, corns, hammer-toes and users of bandages and compression stockings.

Bunions

Feet with bunions must have extra space. But at the same time, the footwear must fit comfortably. OrthoStretch® gives you flexibility at the tender spots.

Hammer-toes

A foot with hammer-toes needs extra space above the toes. OrthoStretch® provides space - without designing the footwear with extra height.

Diabetes

People with diabetes must be meticulous about their feet. OrthoStretch® follows the movement of the feet and minimizes the risk of pressure sores on the feet and toes.

PROTEKTOR®

The most important part of the shock-absorption is placed **inside the footwear**, where a PPT® Protektor® insole protects your feet from strain.

The material that we use for shock-absorption is the original medical rated **PPT®**, which we have an exclusive right to use in footwear. For many years, **PPT®** has been the highest rated shock absorber in the ortopedic business. It has the best specifications regarding elasticity, purity and lifetime - and combined with OnSteam® lining, it has top rating for moisture transport.

Protektor® insoles are also sold separately in 6 and 3 mm thickness. The outer sole also plays a part in the shock-absorption, but it can not contribute enough by itself, as it must also function as a stable take-off.

THE CONCEPT OF NEW FEET

In cooperation with Nordic therapists, the Danish company New Feet has developed shoes for sensitive, diabetic or arthritic feet.

New Feet Footwear is characterized by the fact that it can be adapted to the needs of each user – therefore, there is extra space for individual insoles.

Based on a project with Bispebjerg Hospital Wound Management Association, New Feet started in 2004. The result being a small series of shoes and sandals for treatment and care of wound patients. This was the starting point for the following projects, which focus on healthy feet and furthermore on preventing complications from diabetes, bunions and hammer-toes – and on preventing pain from arthritis.

New Feet is focused on our environment.

We are proud of the fact that all our footwear is produced in Portugal, where the EU standards of production are being met.

New Feet takes pride in always making environmentally friendly choices and has great focus on our green future.

ALL FEET ARE UNIQUE

Therefore, New Feet is not quite like other brands

We design and construct footwear based on the orthopaedic tradition:

COMFORT and **PROTECTION** of the musculoskeletal system is our primary goal.

Our footwear is characterized by:

- Wide forefoot, high stability and secure heel grip
- Soft, padded leather and selected lining
- Moisture-transporting and friction-reducing lining
- All the internal seams are retracted so they do not irritate the skin

WE FOCUS ON DIABETES AND ARTHRITIS

We and our resellers are happy to give advice, but your therapist is the one who has access to your medical history, and thus a therapist's advice is important.

VARIOUS SHAPES AND SIZES

New Feet uses various lasts and outer soles with various qualities that fit your feet perfectly in order to maintain diversity in both functionality and fit. Try on our different types of shoes, so you can find the shape that fits your feet perfectly.

Please note that shoes with Orthostretch are extra spacious.

WE HAVE 3 DIFFERENT GROUPS OF LASTS:

SLIM

MEDIUM

WIDE

SLIM, MEDIUM and WIDE. In each of these groups, we have various types of outer soles. SLIM is the slimmest group of lasts with much more space compared to other footwear.

INDIVIDUAL ADAPTATION

Easy adaptation of the footwear is one of the most important features of New Feet shoes.

Velcro straps are extra long and divided into fields. They can be customized for the perfect fit for your foot. Thus, our footwear can be used by people in need of extra space for swollen feet and compression stockings - or insoles and bandages.

We use zippers in several of our models. Combined with velcro or laces, they provide a good fit and an easy way to put on and take off the shoe.

New Feet has built-in arch support in some of the models – look for the “arch support” symbol.

ROCKER-FUNCTION

In some cases, there is a need for help when walking. Pain in the forefoot, stiff toes or impaired movement in the ankle joint are some of the conditions that can be helped by shaping the outer sole in a way that will help when walking, so that the foot is less strained, and walking is easier.

NEW FEET INSOLES

OUR FEET ARE THE FOUNDATION OF THE BODY

As with a house, the foundation is vital. It's the basis that keeps the rest of the construction working. The main cause of pain in the back, lower back, hips and knees is the impact of walking on hard surfaces. Another factor is that the foot's position is not the best possible. If you walk crookedly, it will have an impact throughout your entire body, resulting in pain from the lower back to headaches.

KORREKTOR® - CORRECTIVE INSOLES

New Feet produces insoles that correct your foot position. They can be worn in New Feet footwear that has plenty of space – or you can wear them in your current footwear.

KORREKTOR®

The foundation of a healthier body is that we move correctly. Misalignment of the feet often causes pain in the feet, knees, hips, back and lower back, as the body compensates for walking crookedly.

In the illustration, you see how an insole with an arch lift straightens the foot.

If misalignment is not treated, the following can be the long-term complications:

- HALLUS VALGUS
- HAMMER TOES
- PAIN IN THE FOREFOOT AND THE HEEL
- PAIN IN THE HIP AND LOWER BACK

**WITHOUT
Korrektor®**

**WITH
Korrektor®**

NEW FEET SOLES

PROTEKTOR®

Basic

200-0 Protektor® Basic 6 mm
Protektor® is a 6mm flat sole with superior shock-absorption. This is the sole you find in most New Feet footwear.

200-3 Protektor® Basic 3 mm
For use in footwear with limited space.

KORREKTOR®

Korrektor® comes in several versions – depending on the extent of your misalignment, there is a Korrektor® for you too.

Soft

200-2 Korrektor® Soft ¾
The soft version is built in several layers with a corrective insole with a 3mm PPT® shock absorbing material on the top. It feels soft and comfortable and does not lift as much as the other soles.

Medium • 200-21 Korrektor®

Medium ¾
The medium version is made of a material in medium density.

High • 200-22 Korrektor®

High ¾
The high version is made of a firmer foam with higher density.

High slim • 200-32 Korrektor®

Slim ¾
The slim version is a slimmer version of High. This is suitable for narrow or open footwear.

Removable insole

Adjustable
velcro straps

Solid heelcap
